

INTRO TO COMMANDS

/ - FORWARD SLASH

\ - BACK SLASH

FOLDERS ARE DIRECTORIES

GET USED TO IT

TO FIND DR. STUARTS INDEX.HTML we could use the absolute name. The starting `"/` means we're at the root

`/home/faculty/b079/b1s96/public.html/index.html`

Using the absolute name is a bit cumbersome

SOMETIMES YOU CAN USE SHORTCUTS

"~" finds user w/ the name b1s96

~ b1s96 / public.html / index.html

BY DEFAULT YOU HAVE ACCESS TO YOUR OWN FILES TO MODIFY AND VIEW

THE **webshare** COMMAND ALLOWS US TO GIVE ACCESS TO OTHER USERS TO VIEW OUR FILES

WHEN YOU OPEN THE COMMAND SCREEN YOU START IN THE HOME DIRECTORY

CONSIDER EACH DIRECTORY TO BE A ROOM YOU CAN MOVE TO

THE COMMAND **cd** is change directory

cd public.html

THIS MOVES YOU FROM THE HOME DIRECTORY TO PUBLIC HTML
